About Us

Norweld Australia has been designing and building aluminium flatbed trays and canopies for the most part of the 50 years we have been in business. Years of testing and refinement have seen us design and build what we feel is the best tray and canopy package range on the market.

With extensive experience working with the most popular 4x4 models, we can offer packages that best suit the capabilities of your car. Our design philosophy is to offer great looking, functional and robust tray and canopy packages for the most common 4x4 vehicles on the market.

We have a number of great tray and canopy packages available to suit all budgets. When selecting our packages, you have the ability to choose a build with spec levels and options that suit your intended use.

Our products can be transferred onto your next vehicle, if it is a similar style and size, with minimal change-over parts and cost. This allows you to set up your build for long term enjoyment and use - either for work or play. If you require a one of our deluxe trays, wind-off or full-time canopy, we have a package to suit your needs, whether it is for a weekend away with the family or that long-planned trip.
